

Clean Machine's "PC Concierge" service regularly performs maintenance and performance optimization service on both my home and business computers. They take care of the kind of standard checks that all of us probably should be doing on a regular basis but don't. They check for spyware and viruses, run disk defragmentation, and ensure proper configuration of applications such as Windows Firewall.

I particularly appreciate the detailed report that provides information about the services that they did. I am amazed at the number of spyware/infected objects that they remove each cleaning! They also include a detailed activity log that shows exactly what the technician did. Their security levels make me extremely comfortable allowing such unseen access to my computers. I am a satisfied customer and plan to stay with Clean Machine indefinitely.

The Clean Machine concierge service is wonderful. Since employing this service I have not lost any computer time at my business or at home. They take care of removing all the viruses and spyware etc, overnight under strict security guidelines. I am no longer paying an expensive tech person to come in and figure out why my computers are down. Clean machine fixes the common issues before they become real problems!

I have been a user of PC Clean Machine's PC Concierge service for several months now and I'm a huge fan! Primarily I use my PC for a home office system and Clean Machine has saved me countless hours of clueless stumbling through diagnostic and remediation programs. I am not technically savvy, and keeping up with the latest anti-spyware and

PC optimization programs is way beyond my comprehension and patience. Enter Clean Machine: One a month, overnight while I'm asleep, they scrub and optimize the performance of my PC. The following morning a report is in my email detailing exactly what they've done and whether or not they detected any issues requiring remediation. They run anti-spyware/adware programs, de-frag my disc and do an overall system check-up. It's like a complete lube job and oil change for my PC, with some new spark plugs thrown in for good measure. After that, I'm good to go...and go fast!!

One time my seven-year-old son asked my wife -- the mother of seven kids -- why she has cleaning people come in once a month instead of just cleaning the house up by herself. When she could finally speak again, she said, "Because it takes four women three hours to clean everything. Would you like to work with me on that twelve hours' worth of cleaning, or would you like them to do it?"

Richard instantly became a believer in cleaning services.

For similar reasons, I've become a believer in Clean Machine. Their name perfectly describes what they do. I used to dedicate time to cleaning up my laptop, or suffering the consequences if I didn't. Now I periodically leave my laptop on overnight, and when I get up in the morning I have a pristine, perfectly healthy machine. All the things that I should do, but don't get around to enough, are completed -- disk defrag, disk surface scans, virus scans, junkware and malware elimination, you name it. It's managed by real people, too, who are always polite and professional, so when I have questions or I need to reschedule I can get real answers and feedback. And their log shows precisely what the "concierges" did while I was sleeping.

Clean Machine saves me time, protects me from junk and malware, and makes me more productive. It's definitely worth using.

Most of us are quietly being held hostage—by our computers. If there is a failure, my work life stops dead.

This is why the peace of mind that comes with PC Clean Machine's check-up and preventive maintenance is so incredibly valuable. Their associates are extremely responsive and I saw an immediate increase in speed after the first sweep.

I highly recommend this service.
